

INSTRUCTIONS FOR VOTING THE TOUCHSCREEN VOTING UNIT:

How to use the Touchscreen Voting Unit:

1. Go to the polling place listed on your Sample Ballot. If you go to another polling place, you may not get to vote on all the issues you are entitled to vote on. If you need to know where your polling place is located, please call the Registrar of Voters office at (909) 387-8300.
2. Check in with the polling place clerk. You will be asked your name and if you are registered to vote, your name will appear on the roster. Sign the roster by your name. If you are voting for the first time, you may be asked for identification.
3. The clerk will activate a voting card for you. Insert this card into the touchscreen voting unit where it is indicated. If you need help, ask the clerk to help you – that is what they are there for!
4. Follow the instructions given to you on the screen of the touchscreen voting unit. The voting unit will display the issues that you are entitled to vote on. If you skip voting a contest, the voting unit will alert you. The voting unit will not allow you to over-vote.
5. After you have voted on all the issues, you will be asked to review your choices. Once you have reviewed your choices, you will have the opportunity change any of your choices. Next, you will be asked to print the paper audit and to review your choices once again. This is called the Voter Verifiable Paper Audit Trail (VVPAT). The printer for this component is located on the left-hand side of the voting unit. This paper audit trail is required by State Law and serves as a tangible record of all votes cast by each voting unit.
6. Once you have finished voting, return the activation card to the polling place clerk.
